4. Click the drop-down menu to select the newly added system and save it.

5. 網 Network > Open Network Preferences > Advanced > TCP/IP:

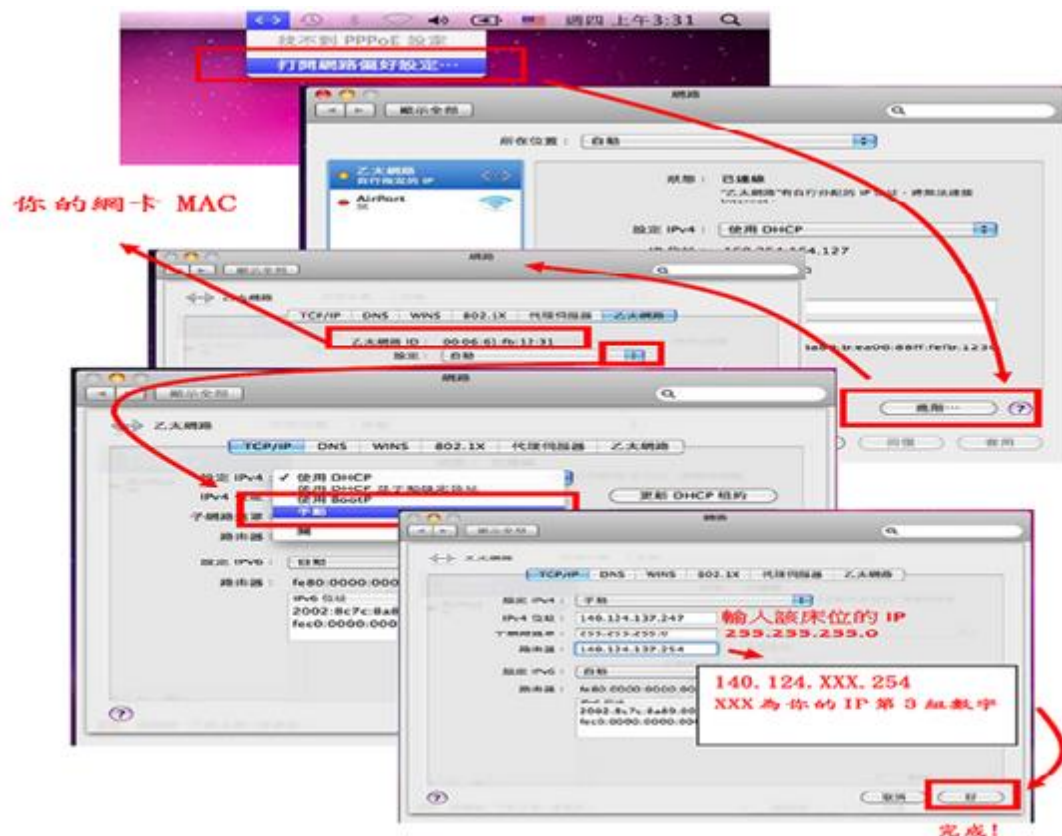

"Specify IPv4" to "Manual".

"IPv4 address" is the IP just remembered

"Subnet Mask" is "255.255.255.0"

"Gateway device" is "140.124.XXX.254"

(XXX is the third digit of the IPv4 address)

6. Network > Open Network Preferences > Advanced > DNS

\*\* After logging in to the Ethernet ID on the Taipei Tech Portal, you need to wait for the system to write for about 3 minutes before attempting to connect.
